VOLUMETRIC WEIGHT RULE**

Avoid using wooden boxes or bulky containers, as shipment charges is based on **either volumetric weight or actual weight, whichever is greater**. The volumetric weight of the package is calculated as follows:

$$\frac{\text{length} \times \text{width} \times \text{height}}{6000} \text{ (values in cm)}$$

The value obtained must be less than 12 kg for weight category 1, less than 24 kg for category 2, less than 36 kg for category 3 and less than 48 kg for category 4 otherwise the package falls into next category.

Example: Actual weight = 10 kg and Volumetric weight = 14 kg → This package falls into weight category 2
 Actual weight = 14 kg and Volumetric weight = 10 kg → This package falls into weight category 2
 Actual weight = 10 kg and Volumetric weight = 11 kg → This package falls into weight category 1
