### VOLUMETRIC WEIGHT RULE\*\*

Avoid using wooden boxes or bulky containers, as shipment charges is based on either volumetric weight or actual weight, whichever is greater. The volumetric weight of the package is calculated as follows:

**length x width x height (values in m) x 250 kg/m<sup>3</sup>**

Example: For a parcel of 10 kg, L 50 cm, l 40 cm, h 30 cm

→  $0,50 \times 0,40 \times 0,30 = 0,06 \text{ m}^3$

→ Volumetric weight:  $0,06 \times 250 = 15 \text{ kg}$ .

The value obtained must be less than 12 kg for weight category 1, less than 24 kg for category 2, less than 36 kg for category 3 and less than 48 kg for category 4 otherwise the package falls into next category.

Example: Actual weight = 10 kg and Volumetric weight = 14 kg → This package falls into weight category 2  
 Actual weight = 14 kg and Volumetric weight = 10 kg → This package falls into weight category 2  
 Actual weight = 10 kg and Volumetric weight = 11 kg → This package falls into weight category 1
